

# Measuring Guide

All measurements listed on our website are INTERNAL cover measurements. These are the width, depth and height that the hob cover encloses. Add 7mm to this measurement to get the external dimensions of the metal cover, and a further 4mm to get the external dimensions of the rubber trim.

To measure your hob, measure the width (W), depth (D) and height (H) of the area which the hob cover must enclose, as shown in the diagrams below.

If you are unsure about the measurements required, please [email us](#) for help, and include a photograph of the top of your hob.

For example, one customer supplied width and depth measurements which seemed straight forward, as per the green lines on the first image right.

However, inspection of the photograph supplied lead us to notice an issue with the venting and raised sides at the rear of the cooker.

We asked the customer to supply the measurements indicated in the second image, and made a cover to fit.

**The more information you can provide, the easier it will be for us to ensure you get the perfect HobCo Hob Cover.**

## Remember: Measure Twice, Cut Once!
